Mid/Senior QA Engineer

About Alcatraz AI:

We're an award-winning, Series A startup, backed by Silicon Valley VCs, as well as some of the largest security companies in the world. We are disrupting the $70B access control industry through facial authentication and artificial intelligence. Our product is a frictionless and secure physical access control platform built with our proprietary full-stack software and hardware that integrates into the existing security infrastructure in corporations. Enterprises choose us to modernize their infrastructure and deliver a touchless and secure solution for their employees.

Key responsibilities:

You will be part of a highly productive team which ensures the quality, reliability, and safety of an on-prem and cloud based platform which integrates with an embedded device and third party ACS systems. You will be designing test methods and test plans for regression and stability, gathering and parsing of test results to establish baselines and to assess feature and product quality. You will be providing reporting mechanisms for analytics of test pass/fail detection. You will be responsible for testing the platform, the integration between the system and embedded devices and ACS systems.

Qualifications:

- 3-4(Mid) / 5-6(Senior) years of testing experience in agile teams (Component/Integration/System/Integration/UAT/WebUI/API)
- Self-motivated with ability to work without supervision
- Very good knowledge in Linux administration
- Very good knowledge in Windows administration
- Comfortable working with shell and scripting
- Strong debugging and troubleshooting skills
- Experience testing embedded, on-prem and cloud systems

- Understanding SSH, TLS, VPN, Networking – TCP/IP
- Report defects and follow-through as necessary to complete the testing cycle
- Experience with issue tracking systems like Jira, Confluence
- Provide timely status updates
- Excellent in verbal and written communications
- Results oriented
- Passion to work in a high dynamic environment with start-up culture

The following will be considered as advantages:
- Education in Math/IT/Computer science
- Experience testing embedded services
- Experience testing web applications
- API testing
- Python scripting knowledge
- ISTQB certification

Why You Should Join Alcatraz:

Alcatraz AI offers a cutting-edge solution that represents the future of physical security access control, highly valued by our customers.

Our startup enjoys strong market momentum and tremendous potential for growth.

We foster a culture of innovation, encouraging builders, makers, and creative thinkers to thrive.

Alcatraz AI is committed to equal opportunity employment.

We know you're already intrigued by the role, but let us share more about the our **extensive benefits and perks we offer:**

- Stock options
- Premium Additional Health Insurance
- Unlimited time off
- Food vouchers
- Site bonus for transport / internet expenses
- Co-sponsored Multisport / Coolfit card
- Office massages
- Snacks & drinks
